Uppsala 2009-11-12

Pressrelease.

Maybe your favorite beer is produced with the help from a robot from Uppsala!

An order worth over 1 200 000 Swedish crowns to Ramsta Robotics.

Bühler GmbH in Germany has given Ramsta Robotics an order of 3 Clever Cleaner robots for washing in a new Malting House, Boortmalt in Antwerpen. The manual washing with a high pressure cleaner in a malt house is very laborious and unhealthy work and it exposes the working staff for a lot of different health risks.

After thoroughly tests with the robot in a malting house in Erfurt, Bühler has decided to offer their customer the option to replace human washing with robot washing.

Bühler GmbH is a big international producer offering complete solutions of malting house plants worldwide and now Bühler is able to offer a solution that eliminates the health risk by using a Robot instead of human in the high pressure washing procedure.

The Robot will be installed at Boortmalt in the spring of 2010.

The Bühler order could be a breakthrough for finding new applications for the robot other than in pig production and Ramsta Robotics think that this could be the first of many installations in malt houses in Europe as well as outside Europe.

Danish Malting group (Carlsberg) already using a robot in their malt house in Denmark and the result is so positive that they planning to increase the use of robot washing.

Facts:

There are over 350 Clever Cleaner washing robots in use today all over the world. The robot eliminates a hard and unhealthy manual work in mainly the pig production when washing manually with a high pressure cleaner. But the robot is also in use in other sectors were there is a need to eliminate exposure to human health risks.
